

**Columbia University  
Department of Psychology**

**The Psychology of Stereotyping and Prejudice  
PSYC S3610 (3 points), Summer 2017**

**Course Information**

Location: Schermerhorn (Room TBD)  
Term Dates: May 22-June 30  
Mondays and Wednesdays, 5:30pm-8:40pm

**Instructor Information**

Nadav Antebi-Gruszka, PhD  
E-mail: n.antebi-gruszka@columbia.edu  
Office Hours: By appointment only

***Brief Course Description:*** A multidisciplinary review of seminal and current theoretical and empirical writings about stereotyping, prejudice, stigma, and discrimination. Among other topics, we will explore why people hold stereotypes and discriminate against others, delve into the nature of implicit and explicit prejudice, and discuss the consequences of prejudice and discrimination. We will also focus on certain social groups that are disproportionately affected by prejudice and discrimination, such as LGBTQ+, fat, and racial/ethnic groups.

***Prerequisites:*** Science of Psychology (PSYC 1001) or Mind, Brain, & Behavior (PSYC 1010), or equivalent introductory psychology course. Students who have not taken one of these courses will require instructor permission. A prior course in research methods is highly recommended, but not mandatory. If you do not have a psychology background and are interested in this course, please contact me to determine fit and obtain permission before enrolling.

***Full Description:*** This course critically reviews seminal and current theoretical and empirical writings about stereotyping, prejudice, stigma, and discrimination. Within the field of psychology, we will review writings primarily from social psychology, but also from cognitive, developmental, and cultural psychology. Since psychological research focuses almost solely on individual- and interpersonal-level processes and consequences of stereotype and prejudice, we will complement our review with readings from other disciplines in the social sciences, including sociology and public health. This multidisciplinary approach will allow us to holistically investigate the individual-, interpersonal-, structural-, and cultural-level processes underlying prejudice and discrimination, as well as the effects of multi-level discrimination on the health and well-being of individuals and populations.

In order to facilitate a better understanding of the psychology of prejudice and discrimination, you will be encouraged to apply the topics explored throughout the course to current events (e.g., Trump's Travel Ban), public discourses (e.g., bathroom use for transgender people), and social movements (e.g., Black Lives Matter). To inform our perspective about these current affairs, we will explore the effects of prejudice and discrimination on the lives of specific social groups from a social justice prism, including racial and ethnic groups, LGBTQ+ communities, and fat people, among others.

It is my sincere belief that the nature and consequences of prejudice and discrimination cannot be fully understood by only reviewing and critically analyzing academic writings on these topics. Therefore, this course will include several experiential activities (e.g., IAT, role play, media representation analysis) that will be interwoven into the sessions. These activities are designed to encourage a more personal and unmediated analysis on the psychology of

stereotyping, prejudice, and discrimination. In doing so, it is my hope that you will gain a profound intellectual and personal understanding of prejudice and discrimination.

This course will consist of short lectures at the beginning of every session, followed by an in-depth critical discussion about the assigned readings and material covered in class. In the first two sessions, I will lead the short lecture and discussion to model the format of presentations that will later be expected from all students for the remaining sessions (see Course Requirements for further details on student session leadership).

***Role of PSYC S3610 in the Psychology Curriculum:*** PSYC S3610 is a seminar designed especially for undergraduates majoring in Psychology and for students participating in the Psychology Post-Baccalaureate Certificate Program. It will fulfill the following degree requirements:

- For the Psychology major or concentration in the College and in the School of General Studies, for the Psychology minor in Engineering, and for the Psychology Post-Baccalaureate Certificate Program, this class will meet the Group 3 distribution requirement.
- For the Psychology Post-Baccalaureate students and for Psychology majors who enter Columbia in Fall 2013 or later, it will fulfill the seminar requirement.
- For the Barnard Psychology major, this class will fulfill the senior seminar requirement.

***Readings:*** No textbook is required for this course. Most weeks the readings will comprise theoretical and empirical articles, literature reviews, and other readings from non-academic sources (e.g., popular media). All assigned readings are listed in the Schedule below and will be posted on CourseWorks.

### ***Course Objectives***

Upon completion of this course, you will be able to:

- Demonstrate broad knowledge about the development, consequences, and various levels of stereotypes, prejudice, and discrimination
- Apply concepts related to stereotyping, prejudice, and discrimination to real-world events
- Gain further insight into the many ways in which stereotypes, prejudice, and discrimination affect your life, as well as other people's lives
- Critically analyze theoretical writings and empirical research findings in the social sciences
- Communicate scientific findings related to prejudice and discrimination to broader (non-academic) audiences
- Challenge your own stereotypes, prejudice, and stigma towards yourself and other people in an effort to develop your own social justice agenda

### ***Course Requirements***

**Class Participation:** The assigned readings are designed to expand your current knowledge, spark your curiosity, and improve your critical thinking and analysis skills. The various topics addressed in this course are complex and multidimensional, and thus, “unpacking” them via in-depth discussion is warranted. To that end, you are expected to come prepared to class having read **ALL** assigned readings. This will enable you to contribute to class discussion and offer high-level, critical, and thought-provoking commentary.

Discussing topics and participating in class activities related to stereotyping, prejudice, and discrimination is very likely to not only spark your intellectual curiosity, but also your personal reflection and emotional reaction and even at times some discomfort. This is expected given the sensitive nature of the topics. As such, apart from being an active and collaborative member of the class group, you are also expected to be respectful and kind towards your fellow classmates.

Please note that class attendance is insufficient for full credit. I acknowledge that we all have different learning practices and personalities, and as such, there is no right or wrong method of participation in class. Generally speaking, effective class preparation and participation could include:

- Asking insightful or clarifying questions
- Connecting the assigned readings to other readings we have reviewed in the course, or reading you have done on your own, while drawing parallels and/or contrasts among findings or concepts
- Actively listening to fellow classmates and responding to their ideas in a constructive and respectful manner
- Offering thoughtful critiques of the reviewed research and providing convincing arguments and suggestions for how it might be improved
- Bringing in other academic and non-academic sources that shed light and facilitate the gaining on new insights on the topics covered
- Applying the various concepts and research findings discussed to current events, domestically and globally, in a way that further illustrates these concepts and findings

Brief Critical Response Papers: Reading can be a passive endeavor. In order to facilitate a more active and thoughtful analysis and integration of the topics discussed in the assigned readings, for 8 of the 12 class periods, you will be asked to submit a 1-page response paper addressing at least **two** of the assigned readings. The response paper will include two sections. First, you will briefly and **critically** discuss a topic/concept/finding that sparked your curiosity and interest. In this section, you will offer a critique of (at least two of) the readings which is well-rounded and substantial. Simplistic critique, such as about the sample size or study design, is insufficient. Second, you will pose at least **two** questions that stem from your critical discussion (i.e., part 1 of the response paper) and are of further interest to you. These questions should demonstrate your **critical analysis and understanding** of the readings and should not be vague, overly general, or simplistic in nature (e.g., “what are the limitations of the study?”, “what is stigma?”). Personal reflections, accounts, or experiences are **not** allowed for these response papers. These papers are strictly academic and analytical in nature.

All response papers are to be submitted no later than 10am on the day of class on CourseWorks. Please bring a copy of your questions with you to class as you are encouraged to contribute to the class discussion by posing them to the group. In addition to promoting active engagement, these response papers will help you keep current on course topics and readings, and help me monitor the class’ progress and students’ understanding of the material. Remember: reading assignments are mandatory and you are encouraged to bring your questions to class even on sessions when a Response Paper was not due.

In sum, your response papers should include substantive critiques of the reviewed material, along with other points of focus. Here are some ideas to help you in writing your response papers:

- Making connections/links between different concepts, theories, ideas, and findings (within or between class sessions)
- Addressing relationships between the presented material in this course to other academic or non-academic (including fictional) material you were exposed to outside of this course
- Applying the various concepts, and ideally the research findings, to current events, policies, social groups, and social movements (but not to personal experiences)
- Well-articulated questions or arguments proposing novel theories or insights
- Most importantly, your response papers should reflect a thoughtful and critical analysis and your questions should be useful in generating in-depth discussion.

Finally, note that the following format should be used for your Brief Critical Response papers: Double-space, 12-point Times New Roman font, 1” margins (Normal in Word).

Session Leadership: You will be responsible for leading the class session for **two** class meetings. Leading a session includes presenting (in a format of your choice) the topics and research covered in the assigned readings, and facilitating a lively and respectful class discussion. In the first two sessions of the course, I will lead the short lecture and discussion to model the format of presentations that will be expected from you as a leader or co-leader.

Having fun while learning allows for better absorption and retention of the material. Additionally, exploring the concepts of prejudice and discrimination through research papers and academic writing is limited in its ability to convey the complex *feeling* of being a target of stereotypes, prejudice, and discrimination, or being the holder of such biased beliefs. You are encouraged to be creative and innovative in your presenting the material and leading the class discussion. Additionally, your session leadership must also include an activity that will facilitate in-depth learning. Experiential and reflective activities, use of audiovisual media (e.g., short YouTube videos, TED talks), knowledge-based games (e.g., Prejudice Jeopardy) are just a few of the many ways you can enrich and enhance the quality of your presentation. I encourage you to run any ideas you might have by me prior to your presentation. I will circulate a course schedule in the first class for you to sign up for leading your two sessions.

Personal Reflection Essays: As social beings, we hold stereotypes and prejudice, and discriminate against others (intentionally or unintentionally). Learning about stereotyping, prejudice, and discrimination can be transformative in raising our awareness about our own biases. Improving your self-awareness would help you challenge your own biases. In order to facilitate an introspective process of your own stereotypes and biases, you will submit three personal reflection essays throughout the semester. Each of the essays will have specific instructions and prompts that will be given in class prior to the due date. As with all other assignments, we will go over the instructions together and I will provide an example of a high-quality reflection.

I will be the only one reading your personal reflection papers. Your reflection papers will be graded based on the demonstrated quality of your introspection and self-evaluation, in addition to the actual writing quality. Your reflection papers will be submitted anonymously in class to further protect your privacy and confidentiality, and to prevent any grading bias. The content of your reflection essays (e.g., stereotypes about sex workers) will not be shared with anyone, and will not, by any means, affect my evaluation of you as a student. It is not my intention to judge the content of your biases, but rather to evaluate the quality of your reflective process.

In writing your personal reflection essays, you are asked to be as honest, direct, and personal as possible. We tend to use various defense mechanisms (i.e., intellectualization, rationalization, projection) to protect our self-image when discussing such sensitive topics, but in this course, we are operating with the underlying fact that we are all biased in many ways. As such, it is given that you, like me and everyone else, are biased. Accordingly, this assignment will very likely make you feel uncomfortable at first, but to some extent, this is the exact purpose of these essays. “Sitting” with the discomfort that may arise while reflecting on your own biases is therapeutic when done in a safe space. Therefore, please make sure to find the right time and place to reflect and write your essays. Gradually, your anxiety and discomfort will dissipate (habituation), and hopefully, you will be better able to access your own biases. Remember, self-awareness and knowledge play critical roles in your own growth. If, after reflecting and/or writing your reflection essays, you feel that you need additional support, please come see me. I will gladly meet with you to provide further guidance or to support you in your introspective journey.

The following format should be used for your Personal Reflection Essays: 4-6 pages, double-space, 12-point Times New Roman font, 1” margins (Normal in Word), and include page numbers. Please do not include your name or UNI, but rather your date of birth on the back of the last page of your paper.

Op-Ed Article Summary: Clear and succinct writing is one of the main tasks of any scholar. Writing not only allows us to form our ideas in an integrative manner, but also serves as a tool for sharing knowledge with others. It can be quite easy for scholars to limit their audience to their peers by using scientific jargon and inaccessible language. Given the social justice and equity framework of this course, one of our goals will be for you to become better able to share the knowledge you have gained through critical analysis of the readings with other people.

To practice the important skill of being able to communicate complex ideas to the general public, and to further demonstrate your understanding of the readings, you will write **two** Op-Ed style summaries of individual articles you have read. Each summary should include a clear, lay-person narrative of the research described in the assigned reading, as well as an explanation of how the research can be applied to real-life events, situations, or populations.

I will circulate exemplary Op-Ed articles so you can become familiar with the expected structure, language, and overall format of such a summary. We will also review 1-2 Op-Ed summaries in class prior to your chosen submission date. In preparing your Op-Ed style summary, you can get a sense of the quality and clarity of your essay by sharing it with someone who is not familiar with the topic(s), and asking for their honest and constructive feedback on ways to improve your summary. Fortunately, Columbia University cares greatly about communicating science to the broader public, and to that end, it provides many resources to assist you in this task. Here is a useful webpage with many internal and external links that will provide you with further guidance on best practices in writing an Op-Ed style summary: <http://www.earth.columbia.edu/articles/view/2636>.

I will circulate a course schedule with the assigned readings during the first class for you to sign up for two Op-Ed summaries (of two individual readings). All Op-Ed summaries will be shared with the entire class (on CourseWorks) in order to have a collaborative archive with summaries of all of the assigned readings. The following format should be used for your Op-Ed Article Summary papers: 1,000 words limit, double-space, 12-point Times New Roman font, 1” margins (Normal in Word), and include page numbers.

**Grading:** All assignments will be graded on a 0-100 scale. Final grades will be calculated based on the percentages outlined below.

Class Participation.....	6%
Brief Critical Response Papers.....	16% (Each of the 8 papers is worth 2%)
First Session Leadership.....	10%
Second Session Leadership.....	15%
Personal Reflection Essay 1.....	5%
Personal Reflection Essay 2.....	10%
Personal Reflection Essay 3.....	13%
First Op-Ed Article Summary.....	10%
Second Op-Ed Article Summary.....	15%

**Grading Scale:**

97-100= A+	87-89= B+	77-79= C+
94-96= A	84-86= B	74-76= C
90-93= A-	80-83= B-	70-73= C-
		60-69= D

**Class Policies:**

Academic Integrity: As members of this academic community, we are expected to maintain the highest level of personal and academic integrity. Consider this excerpt from the Columbia University Faculty Statement on Academic Integrity: “[E]ach one of us bears the responsibility to participate in scholarly discourse and research in a manner characterized by intellectual honesty and scholarly integrity.... The exchange of ideas relies upon a mutual trust that sources, opinions, facts, and insights will be properly noted and carefully credited. In practical terms, this means that, as students, you must be responsible for the full citations of others’ ideas in all of your research papers and projects... [and] you must always submit your own work and not that of another student, scholar, or internet agent.” More information about Columbia University Faculty Statement on Academic Integrity can be found here:

<https://www.college.columbia.edu/faculty/resourcesforinstructors/academicintegrity/statement>).

Plagiarism – whether intentional or inadvertent – is a serious violation of academic integrity, and will thus not be tolerated. You are required to submit exclusively original work that you wrote, composed, or ideated on your own. If you are uncertain or have any questions about what constitutes plagiarism, I encourage you to read the information provided on Columbia’s website about the various forms of plagiarism and ways to avoid it. Here is the link to a relevant webpage on plagiarism: <https://www.college.columbia.edu/academics/dishonesty-plagiarism>

I am obligated to report any incident of plagiarism to the appropriate channels at the university, which may result in significant penalties that may impact your academic career at Columbia. If you feel overwhelmed, confused, or that you are likely to resort to plagiarism, please talk to me. It is better to inform me beforehand so we can try and remediate the issue, whatever it might be, than to deal with such a serious offense after the fact.

Attendance: Given the seminar style of this course, class participation, and thus attendance, is mandatory. At times, unplanned absences may occur. Such absences will be excused and not affect your final grade as long as they are documented (e.g., a dean’s note). Regardless, you will

be responsible for the work due in that class, including reading responses and other requirements. Please inform me of any absences as early as possible so I can plan in advance if any changes might be needed.

Late Assignments: In general, late assignments will not be accepted and graded. Under very certain circumstances, you will be allowed to submit your assignment within 24 hours of the due date. Such circumstances may include a sudden or unplanned event that significantly impacts your ability to submit your assignment on time.

Class Etiquette: If you typically use your laptop for note taking, accessing the assigned readings or response papers, you are welcome to use your laptop for these purposes. In general, as a show of respect to your fellow classmates and instructor, please refrain from using electronic devices during class, including cell phones and laptops for unrelated reasons. If you find yourself being bored, tired, or overwhelmed, which is only normal, I encourage you to sit down quietly with your laptop closed in order to not disrupt the flow of the class.

Students with Disabilities/Exceptionalities: Students with any disability or exceptionality that may require any accommodations are requested to contact the Office of Disability Services (ODS) in Lerner Hall before the start of the course to register for these accommodations. The procedures for registering with ODS can be found at <http://health.columbia.edu/services/ods> or by calling (212) 854-2388. I also ask that you speak with me on the first class to inform me of any required accommodations, and I would be more than happy to be of service and assistance to address them.

***Class Schedule:***

#	Date & Topic(s)	Assigned Readings	Assignment
1	May 22 1. Introductions 2. Defining Terms and Concepts	Major, B., & O'Brien, L.T. (2005). The social psychology of stigma. <i>Annual Review of Psychology</i> , 56, 393-421.  Phelan, J. C., Link, B. G., & Dovidio, J. F. (2008). Stigma and prejudice: One animal or two? <i>Social Science &amp; Medicine</i> , 67, 358-367.	
2	May 24  The Development of Stereotypes, Prejudice, and Discrimination	About, F. E. (2003). The formation of in-group favoritism and out-group prejudice in young children: Are they distinct attitudes?. <i>Developmental Psychology</i> , 39(1), 48-60.  Baron, A. S., & Banaji, M. R. (2006). The development of implicit attitudes: Evidence of race evaluations from ages 6 and 10 and adulthood. <i>Psychological Science</i> , 17(1), 53-58.	Personal Reflection Essay
	May 29	NO CLASS (Memorial Day)	
3	May 31  Why Do We Adopt Stereotypes and	Fein, S., & Spencer, S. (1997). Prejudice as self-image maintenance: Affirming the self through derogating others. <i>Journal of Personality and Social Psychology</i> , 73(1), 31-44.  Jost, J. T. & Hunyady, O. (2002).
