

Barnard Courses Approved for the Psychology Major

The Columbia Psychology Major requires the completion of at least 30 points, including one course in each of categories 1 – 7 below. You may complete up to 9 points toward the Psychology Major, or 5 points toward the Psychology Concentration, with a combination of approved Barnard or transfer credits. You will not receive credit for courses that overlap substantially with other courses you have taken in our department. Please refer to the table of [Overlapping Courses](#) for a partial list of Barnard courses known to overlap with our courses.

The table below lists Barnard courses that have been pre-approved as meeting specific requirements of the Columbia Psychology Major. The same courses may be used for the comparable requirements of the concentration. If you are interested in taking a Barnard psychology course that is not listed below, please send a copy of the syllabus to your Program Advisor and to Prof. Putnam so that we may determine which requirement it might meet.

Please note that there are relatively few seats for Columbia students in Barnard psychology classes. The fact that you have been able to register for a Barnard class does not mean you have been admitted to it. Almost all Barnard courses require instructor approval to stay in the course, and such approval is usually not given until the first class meeting. Spots in statistics and laboratory sections are particularly rare; they are distributed by a lottery that is not open to Columbia students.
